He holds a bachelors degree in Business and currently resides in Trenton. © Copyright 2020 Referee Report All Rights ReservedQ: Reading whole text file into a String[] Array How do I read a whole text file (as an array of Strings) into a String array? For example, I have the following text file: The cat slept peacefully by the river. The dog barked at the rat. The bird sat on the birdhouse. I want to be able to read each line into a String array, and so I thought of the following: public static String[] readFile(){ File file = new File("c:\dev\resume.txt"); if (file.exists()){ try { BufferedReader reader = new BufferedReader(new FileReader 82157476af
